### Information for Authors

*Natural Product Reports* is a bimonthly journal of critical reviews. It aims to foster progress in the study of bioorganic chemistry by providing regular and comprehensive reviews of the relevant literature published during well-defined periods. Topics include the isolation, structure, biosynthesis, biological activity, and chemistry of the major groups of natural products – alkaloids, terpenoids and steroids, aliphatic, aromatic, and O-heterocyclic compounds. This is augmented by frequent reviews of the wider context of bioorganic chemistry, including developments in enzymology, nucleic acids, genetics, chemical ecology, primary and secondary metabolism, and isolation and analytical techniques, which will be of general interest to all workers in the area.

Articles in *Natural Product Reports* are generally commissioned by members of the Editorial Board, but the Society is always prepared to consider offers of articles for publication. In such cases a short synopsis, rather than the completed article, should be submitted to the Managing Editor at the address given above.
